

**Name: Shubham Rajendra Dhangar**

**Email\_Id:** [shubhamr.dhangar2141@gmail.com](mailto:shubhamr.dhangar2141@gmail.com)

**Phone:** +91 7397954265

## Professional Summary

- **DevOps and AWS Cloud Engineer** with over **5 years of experience** in designing, automating, and managing scalable, secure infrastructure and deployment pipelines. Proven expertise in **AWS administration, containerization, and middleware automation**.
- Proficient in **AWS services** (EC2, VPC, S3, RDS, Route 53, CloudWatch, IAM, ELB), **Infrastructure as Code** using **Terraform**, and **configuration management** with **Ansible**. Skilled in building and maintaining CI/CD pipelines using **Azure DevOps, GitHub, Git, and Jenkins**.
- Experienced in container orchestration using **Amazon ECS** and **Amazon EKS** to deploy and manage scalable, highly available microservices. Skilled in writing task definitions, managing clusters, and integrating with **IAM, ALB, and CloudWatch** for performance monitoring and secure operations.
- Experienced in managing **Kubernetes clusters**, writing **Helm charts**, and deploying containerized applications using **Docker**. Hands-on with **WebSphere Application Server (WAS)** and **IHS**, automating middleware operations using **Jython (wsadmin)** scripts.
- Known for optimizing cloud infrastructure, improving deployment reliability, and collaborating effectively across development, QA, and operations teams. Quick learner with a commitment to DevOps best practices and security.

## Technical Skills

- |                                         |                                                         |
|-----------------------------------------|---------------------------------------------------------|
| ➤ <b>Version Control Systems</b>        | : GIT, GitHub                                           |
| ➤ <b>Configuration Management Tools</b> | : Ansible, Terraform                                    |
| ➤ <b>Build tools</b>                    | : Maven.                                                |
| ➤ <b>CI Server</b>                      | : Jenkins, Azure Devops, Gitlab.                        |
| ➤ <b>Application Servers</b>            | : IBM WebSphere.                                        |
| ➤ <b>Programming Languages</b>          | : C#, .Net, Python.                                     |
| ➤ <b>Scripting Languages</b>            | : Shell Scripting                                       |
| ➤ <b>Cloud Technologies</b>             | : AWS (EC2, ELB, EBS, S3, SNS, RDS, ECS, EKS, DynamoDB) |
| ➤ <b>Virtualization Tools</b>           | : Docker, Kubernetes                                    |
| ➤ <b>Monitoring Tool</b>                | : CloudWatch, Grafana                                   |
| ➤ <b>Release Management</b>             | : Azure DevOps, Jenkins                                 |

## Education Details

- **Bachelor of Computer Applications (BCA)** – North Maharashtra University, Jalgaon – 2021

## Professional Experience

- Currently working as a Software Engineer **Clover Infotech, Mumbai** from June-2024 to till date.
- Worked as a Associate Software **Intelliswift Software, Mumbai** from June-2023 to May-2024.
- Worked as a Software Developer **Vertical TechSoft, Pune** from Aug-2020 to Dec-2022.

## Project Details

### Project – 1:

|                     |                              |
|---------------------|------------------------------|
| <b>Project Name</b> | HIS Configuration Automation |
| <b>Client</b>       | Kotak Mahendra Bank, Mumbai  |
| <b>Role</b>         | DevOps Engineer              |
| <b>Duration</b>     | June - 2024 to till date     |

### **Description:**

Engineered automation workflows to standardize IBM HTTP Server setup across environments. Reduced human errors and improved deployment time with integrated CI/CD processes.

### **Key Responsibilities:**

- Automated installation and configuration of IBM IHS through shell scripts triggered via Azure DevOps pipelines.
- Owned and managed the end-to-end release lifecycle for applications including microservices, middleware services, and chatbot platforms.
- Planned, coordinated, and executed release deployments across development, staging, and production environments, ensuring rollback plans were defined and tested.
- Performed **SSL certificate import and bindings via IHS console**, with automated verification.
- Integrated Git for managing reusable IHS configuration templates.
- Used **Azure DevOps variable groups** to control environment-specific parameters securely.

### Project – 2:

|                     |                               |
|---------------------|-------------------------------|
| <b>Project Name</b> | Middleware Console Automation |
| <b>Client</b>       | Kotak Mahendra Bank, Mumbai   |
| <b>Role</b>         | DevOps Engineer               |
| <b>Duration</b>     | June-2024 to till date        |

### **Description:**

Automated middleware restart procedures to reduce downtime and support safe deployments. Console-based configurations were handled dynamically through scripted workflows.

**Key Responsibilities:**

- Automated **application and server restart flows** using shell scripts and integrated CI/CD.
- Enabled automated **pre-restart health checks and post-restart validations** through WebSphere console APIs.
- Managed the **end-to-end release lifecycle** for applications including microservices, middleware services, and chatbot platforms.
- Planned, coordinated, and executed **release deployments** across **development, staging, and production environments**, ensuring rollback plans were defined and tested.
- Performed **dynamic JVM heap size tuning via console commands** as part of performance improvement cycles.
- Integrated Azure DevOps triggers for seamless restart and rollback operations.
- Automated **certificate import via console and CLI**, validating expiry and proper chain setup.

**Project - 3:**

|                     |                             |
|---------------------|-----------------------------|
| <b>Project Name</b> | Middleware Patching         |
| <b>Client</b>       | Kotak Mahendra Bank, Mumbai |
| <b>Role</b>         | DevOps Engineer             |
| <b>Duration</b>     | June-2024 to till date      |

**Description:**

Developed and implemented an automated patching framework for middleware platforms to ensure critical applications stay secure and compliant. The automation significantly reduced manual intervention and improved system stability.

**Responsibilities:**

- Automated patching of IBM WebSphere and IBM HTTP Server across multiple environments (PROD, UAT, DR).
- Developed shell scripts to streamline patch application and validate post-patch integrity.
- Integrated patching process into Azure DevOps CI/CD pipelines for seamless deployment.
- Managed OpenSSL-based certificate validation and security checks.
- Collaborated with security and compliance teams to ensure audit readiness.

**Project - 4:**

|                     |                             |
|---------------------|-----------------------------|
| <b>Project Name</b> | AWS Cloud Admin             |
| <b>Client</b>       | Kotak Mahendra Bank, Mumbai |
| <b>Role</b>         | AWS Admin                   |
| <b>Duration</b>     | June-2024 to till date      |

**Description:**

Handled AWS administration and infrastructure management activities, ensuring secure, reliable, and high-performing cloud environments. Worked on provisioning, configuring, and maintaining AWS resources with a focus on availability, security, and monitoring.

**Responsibilities:**

- Managed AWS services including **EC2, S3, RDS, DynamoDB, Route53, IAM, and VPC**, ensuring availability and performance.
- Implemented **serverless architectures** using Lambda and API Gateway to streamline application deployments.
- Configured and monitored **IAM roles, policies, and security groups**, maintaining strong cloud security.
- Designed and implemented **disaster recovery strategies** using RDS snapshots, AMIs, and S3 versioning.
- Optimized application and database performance through **EC2 instance tuning, Auto Scaling, and RDS optimization**.
- Implemented **CloudWatch and CloudTrail monitoring**, enabling proactive detection of anomalies.
